SALINE SALT REMOVAL AFTER CARE

2 Hours AFTER the Appointment:

Brush off packed on salt with a cotton swab.

The Evening of the Appointment and the Following 2 Days:

Mix warm water and salt and rub the removal area with a cotton swab 2 - 3 times a day. Pack on the salt mixture after rubbing. This will help further purge color. Gently wash the area at night with Dove Sensitive Bar Soap or Cetaphil. Pat dry with a paper towel.

This is the only time to allow the removal area to get wet.

3 - 14 Days Following the Appointment:

DRY HEAL... if the area gets wet, make sure to pat them dry and do NOT put any moisturizers or healing ointments on the area.

Do NOT pick the scabs... this may cause scarring.

You may cover the redness with a mineral powder makeup.

2 - 3 Weeks Following the Procedure:

Take a photo and send to me after 2 - 3 weeks have passed.

***STAY OUT OF THE SUN AND TANNING BEDS WHILE HEALING, THIS MAY CAUSE HYPERPIGMENTATION.
